

oneday

Total flexibility from day hospitals to short inpatient stays

Flexibilidad total de la hospitalización de día a las hospitalizaciones de corta estancia

DAY CARE BED

EN ONEDay is a multifunctional stretcher capable of dealing with **highly operational** environments such as emergency rooms and accommodating patients for short periods. **Safe** and **functional** during an emergency, with the essential practical equipment including a stretcher and the ease of use of the electric controls.

Its **light structure**, with comfortable handles and five wheels, ensure quick manoeuvring, even in difficult situations.

The design ensures timely execution of operations and commands.

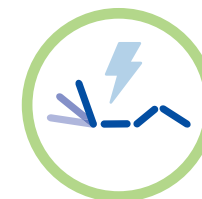

The dimensions are also optimised for moving and stopping in transit areas and lifts in a space-saving manner.

Safe working load	Carga de trabajo segura	260 kg

Easy to handle like a stretcher,
comfortable like a bed

Manejable como una camilla,
comfortable como una cama

ONEday

Art. 320950

4-section electric stretcher.
Camilla eléctrica a 4 secciones.

EN ONEday combines the comfort of a hospital bed with the flexibility of a stretcher:

it can be adjusted electrically from the satellite push-button panel, it can be positioned in a cardiology chair and extended by 18 cm thanks to the extractable section.

To facilitate movement, a fifth wheel and an acoustic alarm for unbraked wheels are provided, which keeps the patient safe.

ES ONEday conjuga el confort de una cama de hospitalización con la flexibilidad de una camilla:

se puede regular eléctricamente desde la botonera "satellite", se puede colocar en posición "silla" y alargarse 18 cm gracias a la sección extraíble.

Para facilitar los desplazamientos lleva una quinta rueda y la alarma acústica de ruedas no frenadas que protege la seguridad del paciente.
